

SUBJECT INDEX

Page references to articles are in lightface; references to abstracts are in italics.

A

- Absenteeism:**
and school phobia, 172–176
- Addiction:**
drug, in youth, 133–134, 187–190
- Adenosine triphosphate:**
in hereditary spherocytosis, role of, 56
- Adoption:**
adolescents, 179;
diagnostic categories among adopted children,
 adoptive parents, 178–179
- Adrenocorticosteroids:**
use in systemic malignancies, 9–10
- Albumin autoagglutination:**
in transfusion problems, 91
- Ambulatory care:**
135–138
- Amino acids:**
release from rat liver cells, 27
- Amphetamines:**
in drug abuse, 131
- Anemia:**
hemolytic, acquired, 58;
hemolytic, autoimmune, 93–99;
sickle-cell, 71–77
- Anesthesia:**
in relation to induced hypothermia, 19–21
- Antibodies:**
in hemolytic anemia, 89
- Anticholinergic agents:**
and dual receptor site theory, 23
- Anxiety:**
among adopted children, 179
- Arthritis, rheumatoid:**
malignancy in, 8–10
- Attitude of Health Personnel:**
144–145

B

- Behavior:**
child, disturbed, 172–199;
rating, 191–195
- Blood:**
type A subgroup, characterization, 33;
transfusion, in hemolytic anemia, 87–92
- Bradypnea:**
and left atrial distention, in dogs, 28
- Burns:**
acquired absence of alpha-lipoproteins and acanthocytosis
 in, 104

C

- Child-mother relationships:**
in depressed children, 197–199;
in school phobia, 172–174
- Comprehensive health care:**
for patients with active tuberculosis, 143–149
- Computers:**
use in behavioral studies, 193–194
use in multiphasic screening, 127–128
- Cytotoxic drugs:**
as a cause of hemolytic anemia, 96–97

D

- Depressants:**
in drug abuse, 130
- Depression:**
in children, diagnosis, 196
- Diagnostic services:**
see Multiphasic screening
- Diathermy:**
effect on vitreous proteins, 11–14
- Drug abuse:**
socio-economic aspects, 187–190
by modern youth, 133–134

Drug hypersensitivity:
in Glucose-6-phosphate dehydrogenase deficiency, 47–48

Drugs:
abuse of, *see* Drug abuse
use in accidental hypothermia, 18;
use in a medical ward, 104;

E

Elective mutism:
diagnostic criteria, 182–183

Emergency medical care services:
and teaching hospitals, 135–138

Enuresis:
and school phobia, 173

Epiphysis cerebri:
see Pineal gland

Extended care facilities:
and tuberculosis, treatment of, 143–149

F

Family relationships:
in adoption, 179–180;
in elective mutism, 182–186;
in school phobia, 172–173

Father-child relationship:
in school phobias, 173

Fear:
and paternal deprivation, 173, 179

Flying doctor service:
in Australia, 163

G

General practitioner:
in England, 152–158

Geriatrics:
and hypothermia, 16–17

Glucose-6-phosphate dehydrogenase deficiency:
acute hemolytic episodes in, causes of, 47;
detection of, 44–45;
mechanism of, 42–44;
variants of, 45–47

Gravity:
effect on the distribution of blood, 103

Group practice:
in British Medical Practice, 152–158;
in the Kaiser health care program, 115

Guilt:
in adopted children, 179

H

Hallucinogens:
in drug abuse, 131–132

Health care program:
Kaiser plan, 111–113

Health examination:
periodic, 126

Health facilities:
mobile units, 139–140;
emergency rooms, 135

Health occupations:
see Physician assistants

Health services:
Australian, 159–163;
British, 152–158;
U.S., 111–150

Heart rate:
mechanism of baroreceptor-induced, changes in, 102

Heinz bodies:
test, 42–43

Hematology:
disorders, symposium on, 42–99;
quality control in a large medical center, 29

Hemoglobinopathies:
classification of, 64;
viscosity of, 74

Hemoglobinuria:
paroxysmal nocturnal, 58–63

Hemolytic anemia:
extrinsic mechanisms of, 87–88;
intrinsic mechanisms of, 87;
transfusion problems in, 87–92

Hereditary spherocytosis:
oxygen tension and pH in, 56–57;
red cell deformability in, 52–56;
role of spleen in, 51

House sparrow:
27

Hyperbaric oxygenation:
in sickle-cell anemia, effect of, 77

Hyperbilirubinemia, neonatal:
management of, 79–86;
use of enzyme induction in, 80–83;
use of phototherapy in, 83–85

Hypersensitivity:
in hemolytic anemia, 94–99

Hypothermia, accidental:
and age, 15;
associated natural diseases, 17;
in medico-legal practice, 15–18;

Hypothermia, induced:
criteria, 19;
in pregnancy, 19–21

Hypothyroidism:
and depression in children, 197–198

I

Immunisation:
programs in Australia, 161

Immunosuppression:
approaches to, 95–99;
and hemolytic autoimmune anemia, 93

Insurance, health:
Kaiser health care program, 111–118

Interprofessional relations:
and the Kaiser program, 112–113;
in the Van Etten Home Care program, 144–145

Isoenzymes:
of CPK, 104

J

Jaundice, neonatal:
see Hyperbilirubinemia
common causes, 80

K

Kaiser health care program:
111–118

L

Light:
see also Phototherapy
11–14

Liver:
cells, rat, 27;
protein, rat, 31

Lung:
inhibition of fibroplasia in implants, 102

Lysergic Acid Diethylamind:
use by youth, 131

M

Marijuana:
use by youth, 132

Mass Screening:
and early detection of disease, 126–129

Medicaid:
role in mass health care, 125

Medical care:
in Australia, 159–163;
in Britain, 152–158;
current challenges in, 118;
revolutions in, 119–124

Medical schools:
and emergency medical service, 135–138;
role in community health care services, 135–137;
solutions to problems of, 136

Medicare:
role in mass health care, 125

Membrane, erythrocyte:
separation and characterization of components, 27

Memphis/S disease:
a new hemoglobinopathy, 68

Methemoglobin, anemia:
and Coombs positive hemolytic anemia, 67

Multiphasic health screening:
history of, 126–127;
current status, 127–128;
pro and cons, 128–129

Myocardial infarction, acute:
pre-hospital management of, 139–142

N

National Health Service:
in Great Britain, 152–155

Nurse-patient relations:
in a private British group practice, 155–157

Nurses:
as physician assistants, 150, 155–158

O

Only child:

in adoption, 178

P

Parent-child relationships:

in adoption, 179–180;
in elective mutism, 186;
in school phobias, 175–176

Parents:

adoptive, characteristics of, 179;
vulnerability of, 180

Paroxysmal nocturnal hemoglobinuria:

clinical presentations of, 58–59;
determinants of rate of hemolysis in, 62–63;
diagnosis, 59–62

Patient care:

improvements in, 137–138

Personality development:

in children, 198–199

Phenobarbital:

in the control of neonatal hyperbilirubinemia, 83–85

Phototherapy:

in the control of hyperbilirubinemia, 83–85

Phobias:

school, origins of, 172–173

Physician assistants:

new roles in U. S. medical care, 150–151;
in a private general practice, 155–158;
principles of, 151;

Pineal gland:

functional significance of, in rats and hamsters, 25

Pregnancy:

and hypothermia, 19–21

Preventive care:

in ischemic heart disease, 141

Primaquine-sensitivity:

in acute hemolytic anemia, 42

Professional-patient relations:

in the Van Etten Home Care program, 144–149

Proteins:

from Bovine tongues, 28;
vitreous, 11–14

Proteinuria:

induced by sera from human renal transplant recipients, 105

Psychotherapy:

in adoption, 180–181

Public health administration:

Australia, 159–163;

Great Britain, 152–154

Q

Questionnaires:

use in study of behavior, 191–195

R

Retina:

burns, 12;
vitreous haze, 11–14

Retinal burn injuries:

see also Solar retinopathy

Retinal lesions:

and vitreous proteins, 11–14

Ruby laser:

effect on vitreous proteins, 11–14

S

Senility:

and hypothermia, 16–17

Sibling relations:

in elective mutism, 182–186

Sickle cell disease:

pathological changes of, 73

Sleep disturbances:

in children, 173

Solar eclipse:

see also Solar retinopathy
injuries resulting from, 3–6, 100

Solar retinopathy:

resulting from the solar eclipse of March 7, 1970,
3–7, 100–101

Splenectomy:

as a cure for hereditary spherocytosis, 51–57;
as an approach to immunosuppression, 95

Stimulants:

in drug abuse, 131

T

Tetracyclines:

structure-activity relationships of, 31

Transfusion:

indications for, in hemolytic anemia, 91–92

Tuberculosis:

comprehensive health care in, 143–149

W**Withdrawal:**

in children, 182, 196–199

X**Xenon-light coagulation:**

effect on vitreous proteins, 11–14
